## OVERVIEW

The RPPS-HS series rotary position potentiometer sensors are used to track the rotational position of a target. They provide an analog voltage output proportional to shaft rotation over a total range of $350^{\circ}$. Typical termination for this sensor is a 3-wire 1 meter ( 36 in ) cable, custom options may be available upon request.

RPPS-HS series sensors are enclosed in a 24 mm or 36 mm diameter housing, with a centered hollow shaft. Mechanically, the sensor can rotate a full $360^{\circ}$. The resistive potentiometric element is made from conductive plastic. The output signal is ratiometric; from $0 \%$ to $100 \%$ of excitation voltage, increasing as it is rotated counter-clockwise.

The RPPS-HS has an absolute output characteristic, which is a benefit over incremental output sensors such as optical encoders that lose their position information in the event of a power failure.
