OVERVIEW

The HGSI ILPS-13Z series Linear Variable Inductive Transducer (LVIT) Position Sensors with free core, through-bore design are used to monitor and track the linear motion or position of a target. These ruggedized sensors are ideal for use in industrial and laboratory applications including automotive R&D, motorsports, industrial, motion control, medical, military and aerospace.

The inductive coil and spoiler combination is a contactless solution, eliminating the wear and dithering issues commonly experienced with Potentiometer type sensors. The amplifier electronics are contained within the housing, no need for an external signal conditioner. The through-bore design protects the sensor from potential damage in the event of mechanical over stroking.

The ILPS-13Z series sensor is made from industrial duty materials for resistance to dust, water, temperature, shock, and vibration.
